

# Deployment/Update Issues & Tasks

## 1) Install

- A - User must install Docker desktop
- B - Download .dmg or .exe for main site that ...
- How to make smooth as possible?
- decompresses
  - installs TrackSync

## 2) Update

- Again... smooth/easy as possible

## Question/Issues

- ① Can we do local hosts entry

### during setup

- would like to be able to get an entry better than localhost:3000

- ② TrackSync needs to mount a folder that user specified during

setup → critical
